HOT TIP! THE POWER OF YOUR PC
Pentium processors operate at varying speeds (denoted in MHz). The higher the MHz the faster the processor will operate. Higher speed processors perform more functions in the same time therefore allowing more complex instructions to be processed.

PENTIUM PROCESSOR RELATIVE PERFORMANCE INDEX (Intel iCOMP® Index2 rating)

200 MHz Pentium with MMX	182
166 MHz Pentium with MMX	160
150 MHz Pentium	114
133 MHz Pentium	111
120 MHz Pentium	100

You should aim to purchase the fastest and most powerful processor your budget allows but remember all processors are upgradeable and can be increased in speed in the future.

DIGITAL CAMERAS

Digital Imaging gives you the ability to take an image and then almost instantly this appears on your PC. This image can then be imported into documents, manipulated, e-mailed and printed out on your colour printer - the applications are endless. Digital cameras can help you provide pictures for projects and can even be used to create personalised greeting cards for friends and relations.
